### **Motivation in Brief**

- Need for highly performant and scalable apps
  - Sudden increase in traffic
  - Slashdot effect
- The Web is programmable
  - Applications provide data and functionality
  - Users end-users (GUI) and programmers (API)
  - Any company with a Web presence has an API
    - $\rightarrow$  Google, Amazon, LinkedIn, Facebook, ...

  - Cloud native and microservices
  - Interface of the app, REST
  - Client side of the architecture, JavaScript, AJAX
  - Infrastructure empowered by cloud technologies
- Technology, Platform
  - JavaScript
    - → client-side + related technologies
    - → server-side asynchronous I/O, node.js
  - It does not mean you cannot combine technologies
    - → Node.js as a Web server, ESB for proxy services with back-end systems, all running in a cloud environment (auto scaling, load balancers, message queues, etc.)

#### **Assessment**

#### Labs

- Presence is mandatory
  - → You can miss up to 1 lab without sending regrets
- Total maximum points: P=40
  - → exercises for labs + your activity + your homeworks
- to pass: P >= 20

### • Final exam

- Mandatory written test: 3 parts, ∼1 hour
  - $\rightarrow$  each gives you a max. of 20 points, the total E = 60 points
  - $\rightarrow$  you must have at least 50% of points from each theme covered by a test part and 50% of points in total
- Final score:
  - $\rightarrow$  P + E = 100 maximum points
  - $\rightarrow$  The more points you have from labs, the better for the exam!
